

Lenses and frames

Today's vision technologies are designed to help you see clearly, while supporting your eye health and comfort.

Below is an overview of options you may want to consider when choosing eyeglasses. As always, it's best to get recommendations from your eye doctor based on your vision care needs.

LENS TYPES

Single vision:	A lens correcting one field of vision – distance, intermediate or near – across the entire surface and is available in standard, premium or digitally designed options.
Lined bifocal:	A lens correcting two fields of vision with a distinct line bordering the segment shape, typical shapes being Flat-top (D shape) or Round (button shape).
Standard no-line progressive:	A lens correcting multiple fields of vision – near, intermediate and far – seamlessly with no lines.
Premium no-line progressive:	A enhanced or custom designed premium lens correcting multiple fields of vision – near, intermediate and far – seamlessly with no lines.

LENS MATERIALS

Plastic:	A material providing good optical clarity at a cost-effective price making it a good option for everyday wear.
Polycarbonate:	A strong, lightweight material with inherent 100% UV protection and superior impact resistance.
High-index:	Advanced plastic materials allowing thinner and lighter lenses, an excellent choice for stronger prescriptions.

LENS ADD-ONS

Blue light:	Advanced technology that helps filter blue-violet light from both natural and artificial sources, including sunlight, indoor lighting, phones and computers which may help reduce digital eye strain.
Anti-reflective:	Multi-layer coating designed to greatly reduce reflections from the lens surface, improve visual clarity, reduce eye strain, and offer an enhanced aesthetic look.
Scratch-resistant:	A protective layer helping to reduce scratches and everyday wear on lenses.
Ultra-violet (UV):	A lens coating blocking harmful UV light from passing through the lens.
Photochromic lenses:	An all-in-one lens automatically reacting to UV light to seamlessly transition from clear to tinted lenses – available in multiple colors.

FRAMES

Basic:	Affordability and functionality make these frames a great choice for someone who doesn't wear glasses during high-impact activities or needs a backup pair of glasses.
Standard:	Greater durability and additional style options provide an improved fit compared to basic frames.
Premium:	High-quality materials and lightweight construction make these frames long-lasting and are available in a wide range of fashionable styles.
Luxury:	The finest materials and meticulous attention to detail create frames designed for people with an eye for style.
